

ROAD ACCIDENT DASHBOARD

Mini Project – Microsoft Excel

Project Objective

Analyze the provided road accident dataset and build an interactive Excel dashboard that helps management identify accident patterns, high-risk conditions, major causes, and areas requiring safety action.

Dataset

Use Road_Accident_Dataset.xlsx containing 5,000 accident records from 2024–2025. Students should work from the raw Accident_Data sheet and create their own analysis.

Use Case 1 – Accident Trend & Hotspot Analysis

Management wants to understand when and where accidents happen most frequently.

Use Case 2 – Accident Severity & Risk Factor Analysis

Management wants to know which conditions are associated with serious and fatal accidents.

Use Case 3 – Driver & Vehicle Safety Analysis

The road-safety team wants to understand whether driver and vehicle characteristics are linked with accidents and casualties.

Dashboard Requirements

- Create a one-page interactive dashboard.
- Use at least 5 KPI cards.
- Use at least 5 charts/visualizations.
- Use at least 4 slicers.
- Use PivotTables/PivotCharts and formulas where appropriate.
- Use clear titles, labels and consistent formatting.
- Filters/slicers must update the dashboard results.
- Do not manually type calculated results.

Expected Deliverables

1. Validated/clean analysis based on the provided dataset.
2. Supporting PivotTables and calculations.
3. One-page interactive Road Accident Dashboard.
4. 3–5 key insights supported by data.
5. At least 3 practical road-safety recommendations.
6. Final Excel workbook with clearly named sheets.
